SCA planner™

System Overview

Problems We Solve

- High cost of manual processes across supply chain

- High cost of inaccuracy and slow response across supply chain

- High cost of fragmented view of costs, capabilities and supplies across supply chain

For Food Industry Purchasing Managers, Finance Managers, Commodity Risk Managers, Suppliers and Customers

Why use SCA Planner?

SCA Planner™ is an integrated SaaS platform that integrates procurement, supply chain, finance, risk management, marketing and other functions to achieve 3-5% lower food costs, 4-6 % lower logistics costs, up to 95% better COGS forecast accuracy, faster response to market and customer changes, variance account reduction and assured supply. Our SOC2 audited cloud offering and certified integration with leading enterprise solutions speeds implementations while lowering costs.

Capabilities

- True contracts, multi-tier supply chain capabilities and real-time planning and execution

- COGS planning across markets, products, commodities, categories and suppliers

- Full-scope digital platform across suppliers, commodity managers, distributors and restaurant companies

- High automation delivered on a web-based, independent platform

The Solution

- Cloud-based SaaS application for all participants

- Highly secure platform with focus on ease of use

- Modular design

- Unlimited users

- Works seamlessly with other processes and optional add-ins

Benefits

> *Farm-to-fork visibility for your supply chain*

> *Developed by food people for food people*

> *Secure, easy to use software design*

> *Cloud-based, web-implemented, constantly updated architecture*

> *Measurable improvements in cost, pricing, forecasting and productivity*

MODULES

- ✓ **COGS Forecast and Price Management:** Automates COGS Forecasting and Projections for 80% higher accuracy, real-time tracking and reporting by region.

- ✓ **Price Approvals:** Automates pricing for smoother prices, smaller variances and more timely reconciliations.

- ✓ **Category Planning:** Automates collaboration to category planning for higher visibility, higher savings and faster response.

- ✓ **Actuals, True-ups and Supplier Management:** Automates supplier actuals reporting and accruals management to manage supplier performance, reduce accrual variances, increase productivity and provide higher price accuracy.

- ✓ **Proposals, Sourcing and Supply Planning:** Reduces sourcing costs 3-5% by using business-derived contract, capacity and demand profile information to develop lower cost solutions that are implemented faster.

- ✓ **Commodity Risk Management:** Automates risk management to enable fast actions that reduce costs, stabilize food prices, and reduce accrual variances.

- ✓ **Insights:** Delivers customized reports, including planning to actuals and historical data for shipments, cost, inventory, capacity master data and other information.

- ✓ **API Integration:** Integrates data from third-party systems for reliable real-time visibility across the supply chain.

- ✓ **Product Information Management (PIM) and Trading Partner Information Management (TPIM):** Propagates items from master to supply base and supply base to master in real time and automates changes to flow through to COGS, Supplier management, sourcing and risk management processes.

- ✓ **Vendor Customer Contract:** Reflects the basis of supplier contracts in vendor customer contracts for more accurate reporting, forecasting, capacity management and supply planning.

- ✓ **Freight:** Automates freight management, integrating with demand forecasts in real time for 80% higher COGS forecast accuracy, faster response and real-time tracking.
